

# Internship Proposal on Fintech “Application of Technology”

Sunil Khadka

# Introduction

Fintech is the application of technology by a business firm to provide financial services to its customers and clients. Transferring money using digital wallet, bitcoin transactions, checking bank statements online are few of the examples of fintech

# Problem Statement

Fintech startups or businesses that involve financial activity find it difficult to perform transactions on a global scale

# Objectives

- To provide a platform for business and fintech innovators to move money across the globe in the form of an api, website and dashboard.

## Description of Internship Work/Project

Attending on-boarding meetings to understand company and project's goals, values and technicalities.

Building pages for the website, blog and dashboard for Tabapay project will also be part of the internship project. Website maintenance, performance optimization, bug resolution, tasks, feature addition etc are some of the work that will be performed.

## Expected Outcome of Internship Activities

A strong grasp in the knowledge and usage of fintech industry, project setup, development processes, project management tools and activities, communication within the working environment and clients.
